

Import project **exercise_collections_11** and please implement next requirements

Student

- Override the **equals(...)** and **hashCode(...)** methods so that to use facNumber only to check if 2 instance are equals or not
- Change **StudentManagement** and **StudentManagementImpl** classes so that to use Set and HashSet instead of List and ArrayList. Again we should be using generics via specifying Student type - meaning the collection could contain only instances of type Student
- Change **addStudent** and **remvoeStudent** methods so that to use the set not list
