Import project *exerises_java_arrays_8* and let's implement next requirements

1. Navigate to class ScannerNumbers
   - implement the functions being defined in the class and call them here
   - follow the java dic for guidance of what to do

2. Navigate to ScannerStudents
   - First finished the Student class implementation following the instructions
   - Then
     1. Create 3 students
     2. Create an array of students with len of 3
     3. Assign the new crated instances of Student into this array
     4. implement the method sortStudentsByFacNumber which sorts the students by fac number
     5. call that method using your array of student and sort the students
     6. implement the method print
     7. call print method and print the students
